

Name: Sneha Kulkarni Roll No: 31

Q1.

A homologous series is a group of organic compounds having the same general formula and similar chemical properties.

Example - Alkanes (CH_4 , C_2H_6 , C_3H_8 ...)

Q3.

A food chain is a sequence showing transfer of energy from one organism to another.

Example: Grass $\rightarrow$ Deer $\rightarrow$ Lion

A food web is a network of interconnected food chains.

Q2.

Fleming's left-hand rule - if the thumb, first finger and middle finger of the left hand are held mutually perpendicular, the first finger points along the field, the middle finger along the current, and the thumb gives the direction of force.

Used to find the direction of force on a current-carrying conductor in a magnetic field.

Q5.

Renewable sources (like solar, wind) can be replenished naturally and do not get exhausted. Non-renewable sources (like coal, petroleum) are limited and take millions of years to form.

Q6.

(a) Saponification is the process of forming soap by the reaction of fat/oil with an alkali.

(b) $\text{Fat/Oil} + \text{NaOH} \rightarrow \text{Soap} + \text{Glycerol}$

Q8.

Trophic levels are the different steps in a food chain at which transfer of energy

takes place. Example: In grass → deer → lion,
grass is the first trophic level, deer the
second, and lion the third.
