Q1.

(i) Metals are lustrous and malleable, while non-metals are generally dull and brittle.

(ii) Metals are good conductors of heat and electricity, non-metals are usually poor conductors.

Q3.

Magnetic field lines are imaginary lines that represent the direction of a magnetic field.

Properties – (i) they start from north pole and end at south pole outside the magnet.

(ii) they never intersect each other.

Q2.

Corrosion is the gradual eating away of a metal due to reaction with air, moisture or chemicals in the environment.

Prevention – applying a coat of paint or grease on the metal surface.

Q6.

(a) An electromagnet is a temporary magnet formed by passing current through a coil wound around a soft iron core.

(b) (i) used in electric bells

(ii) used in cranes to lift heavy iron objects

Q4.

Hydra reproduces asexually by budding. A small outgrowth called a bud develops on the body of the parent. It grows gradually and develops its own tentacles and mouth, eventually detaching to become a new independent individual.

Diagram –

Q7.

Alloys are generally harder, more resistant to corrosion, and have more desirable properties than pure metals for practical use.
