Q1.

A displacement reaction is a reaction in which a more reactive element takes the place of a less reactive element in a compound.

Example: $\text{Fe} + \text{CuSO}_4 \rightarrow \text{FeSO}_4 + \text{Cu}$

Q3.

NaHCO_3 is the chemical formula of baking soda.

Uses – (i) used in cooking (as a leavening agent)

(ii) used in fire extinguishers

Q2.

Newton's 2nd law – the rate of change of momentum of a body is equal directly proportional to the applied force and takes place in the direction of the force.

$$F = ma$$

Q4.

Photosynthesis is the process by which green plants make their own food using sunlight, water and carbon dioxide. It takes place in the chloroplast of the leaf cells, mainly in the mesophyll. The chlorophyll present absorbs sunlight, which is used to convert CO_2 and H_2O into glucose and oxygen.

The overall reaction can be written as –

Diagram of leaf –

Q6.

(a) SI unit of electric current is Ampere (A).

(b) Ohm's law states that the current flowing through

a conductor is directly proportional to the potential difference across it, provided temperature remains constant. $V = IR$

Q7.

(i) used to calculate resistance in circuits

(ii) used in designing household electrical wiring
